## LINE-OF-SIGHT AND HEIGHT RULES

## LINEAR BOOTHS

Linear booths have only one side exposed to an aisle and are generally arranged in a series along a straight line. They are also called "in-line" booths. For this show, 10 ft x 20 ft peninsula booths will abide by the in-line booth height restrictions.

## Dimensions:

In-line booths are a minimum of 10 ft wide ( 3.05 m ) and 10 ft deep $(3.05 \mathrm{~m})$ i.e., $10 \mathrm{ft} \times 10 \mathrm{ft}(3.05 \mathrm{~m} \times 3.05 \mathrm{~m})$. The maximum back wall height limitation is 8 ft high ( 2.44 m ).

## Use of Space:

Regardless of the number of In-line booths utilized, e.g., $10 \mathrm{ft} \times 20 \mathrm{ft}$ ( $3.05 \mathrm{~m} \times 6.10 \mathrm{~m}$ ), $10 \mathrm{ft} \times 30 \mathrm{ft}(3.05 \mathrm{~m} \times 9.14 \mathrm{~m})$, etc. display materials should be arranged so as not to obstruct the sight lines of neighboring exhibitors. The maximum height of $8 \mathrm{ft}(2.44 \mathrm{~m})$ is only allowed in the rear half of the booth with a $4 \mathrm{ft}(1.22 \mathrm{~m})$ height restriction imposed on

**NOTE: Hanging signs are not permitted over in-line booths.

## Sensors Converge

## PERIMETER BOOTHS

A Perimeter Booth is simply an in-line booth that backs up to a wall of the exhibit facility rather than another exhibit.

## Dimensions:

Perimeter booths are a minimum of 10 ft wide ( 3.05 m ) and 10 ft deep $(3.05 \mathrm{~m})$ i.e., $10 \mathrm{ft} \times 10 \mathrm{ft}(3.05 \mathrm{~m} \times 3.05 \mathrm{~m})$. The maximum back wall height limitation is 12 ft high ( 3.658 m ).

## Use of Space:

Regardless of the number of In-line booths utilized, e.g., $10 \mathrm{ft} \times 20 \mathrm{ft}$ ( $3.05 \mathrm{~m} \times 6.10 \mathrm{~m}$ ), $10 \mathrm{ft} \times 30 \mathrm{ft}(3.05 \mathrm{~m} \times 9.14 \mathrm{~m})$, etc. display materials should be arranged so as not to obstruct the sight lines of neighboring exhibitors. The maximum height of $12 \mathrm{ft}(3.658 \mathrm{~m})$ is only allowed in the rear half of the booth with a $4 \mathrm{ft}(1.22 \mathrm{~m})$ height restriction imposed on all
 materials in the remaining space forward to the aisle.

## ISLAND BOOTHS

An Island booth is any size booth exposed to aisles on all 4 sides.

## Dimensions:

An Island Booth is typically $20^{\prime} \times 20^{\prime}$ or larger although it may be configured differently. The maximum height limitation is $20^{\prime}$ with the exception of solid wall structures, which have a 16 ' height limit (please see the "use of space" section below form more detailed information on solid wall structures).

## Use of Space:

Display materials should be arranged so as not to obstruct the sightlines of neighboring exhibitors.

## Sensors Converge

Freestanding or support walls which are solid structures (i.e., you cannot clearly see through them to your neighboring exhibit) may be placed in island booths but may not be higher than 16' tall. In addition, the wall must be placed at a minimum of 5 ' in from each of the aisles surrounding the booth. These restrictions are intended to provide a clear view of the neighboring exhibits. The placement of high equipment must also conform to these rules. These rules will be STRICTLY enforced. Any solid wall structure not approved by show management 30 days in advance of the show may be deemed a violation and may be removed on site at the exhibitors' expense. For Show Management approval, please submit your booth design to Cassidy Kaumeyer, ckaumeyer@questex.com by May $27^{\text {th }}$.

## Hanging signs:

Hanging Signs are permitted to be hung over Island or Peninsula booths that are $400 \mathrm{sq} . \mathrm{ft}$ or larger. There are no restrictions on how high the sign can be hung although it is recommended that you do not hang your sign more than 26 ' from the ground as it is out of the line of sight when it is placed too high.
